

T-Shirt Designer by Michał Jurewicz

Features

1. Choosing t-shirt type (male / female):

It is possible to change the model to both male and female one by pressing one of the button in the top right corner.

2. Colouring the t-shirt (front, back, other – sleeves and neck outline):

It is possible to colour each part of the t-shirt individually. To do so, the user needs to choose which part they want and then simply choose a colour from the colour picker located in the bottom right corner. The buttons to choose a part are just above the picker.

3. Choosing a logo:

It is possible to choose a logo from the available ones by dragging a slider located in the bottom. To the left of the colour picker.

4. Moving the logo around the front of the t-shirt:

It is possible to change the logo's position by dragging both x and y sliders located just below the choosing logo slider.

5. Turning on/off the animation:

It is possible to turn on / off the animations by pressing on of the buttons located just to the left of the model type buttons.

6. Rotating the model:

It is possible to rotate the model by simply dragging it with a mouse.

Possible extensions

The features that could be easily included or modified are:

- more logos available;
- multiple logos at the same time;
- more (and cooler) animations;
- more sections to colour more precisely;

Udanego projektowania koszulek! :D
